

Low Power Terrain-Mercury Protocol for Spooky²

May 2020

Spooky Team

Low Power Terrain-Mercury

These presets are low powered versions of the Terrain-Mercury protocol. The first preset is 1/20th the amplitude of the standard protocol. The 2nd preset is 1/10th the amplitude, the 3rd is 1/5th, and the last is 1/2 the amplitude of the terrain preset.

I recommend running the first preset for 11 days. If you experience a significant amount of detox on this preset, continue running it until the detox is no longer significant. Then move on to the second preset.

Again with the 2nd preset, while you are having significant detox symptoms, continue running this preset until the detox symptoms subside. Then repeat this process with the 3rd preset and the 4th preset. When you've completed the 4th preset without significant detox, move on to the standard full power Terrain-Mercury protocol found in the *Presets* tab of Spooky², under *>Detox*, *>Remote*, *Terrain-Mercury (R) - BY*.

Now take control.
